For AWY 36A

## Automatic filter cleaning

Dust on the air filter is removed as the filter automatically moves up and down when operation stops after a certain time.

**Automatic cleaning function simplifies cleaning even when the unit is installed at a high place.**

Automatically cleaned when it gets dirty. Can also be cleaned by remote controller.

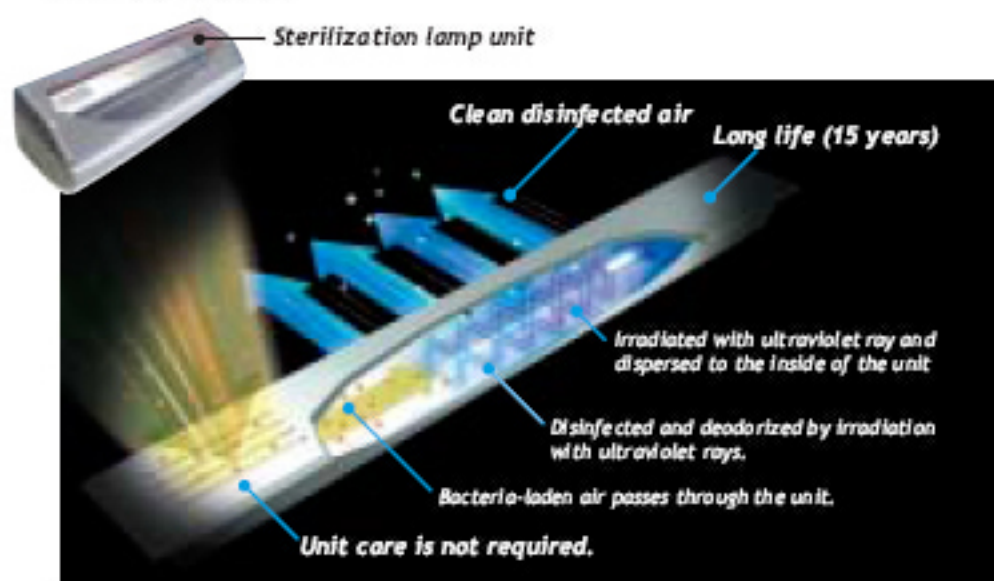

**Filter cleaning required every two weeks with the conventional type is unnecessary.**

Detachable with one touch. Cleaning about once a year is sufficient.

## Powerful clean function pursuing healthiness

Thorough cleaning by UV (ultraviolet rays) of 2 different wavelengths. Mold fungus and other saprophytic bacteria are disinfected inside the "UV sterilization lamp unit" and clean air is delivered.

## Powerful cleaning function considering healthiness

## Sterilization and deodorizing inside the air conditioner

## UV Sterilization Lamp

Prevents growth of mold, bacteria and virus.

After the air conditioner is turned off, dry operation starts inside the air conditioner and then low density ozone generated by "two-wavelength UV sterilization lamp" completely sterilizes and deodorizes the air inside the air conditioner.

Powerful air flow carries the Negative Ions to every part of the room.

Prevents discharge of odors and bacteria.

## Negative Ion Generator

**Discharged air is as clean as the air inside the unit.**

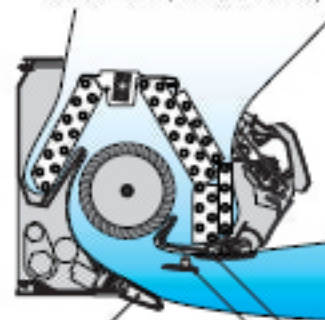

Electric-type "Negative Ion" generator generates and effectively disperses approximately 40,000/cc of negative ions throughout the entire room.

## Healthy horizontal air flow

Cooling area **1.5 times** larger than existing Fujitsu General models

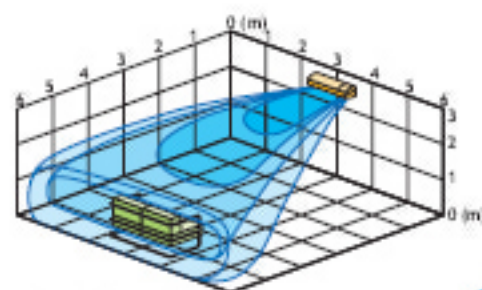

Indoor unit (Cross-section)

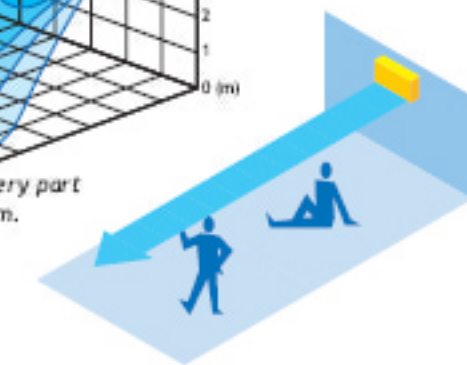

Movable power diffuser (closed)

Double Big flaps

"Healthy horizontal air flow" does not expose occupants to cold air.

Cool air reaches every part of even a large room.

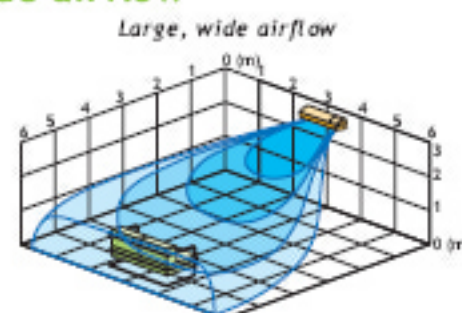

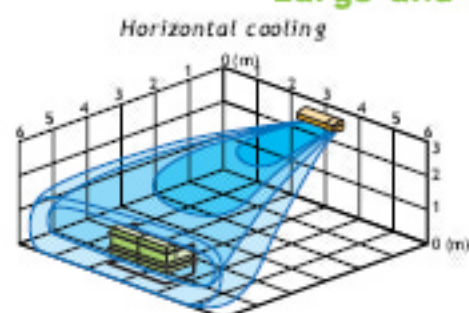

- Healthy because air does not cool the feet.
- Comfortable because the occupants are not directly exposed to the air flow.
- Cool air reaches a long distance.

## Remote controller

## AWY18A/24A/30A/36A

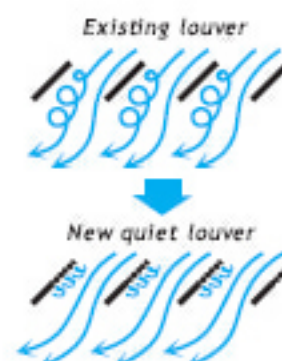

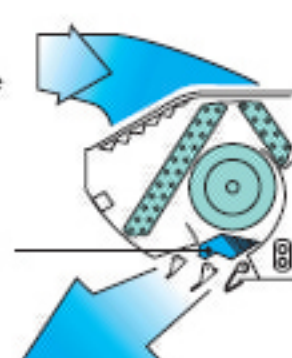

## Large and wide airflow

## Low noise

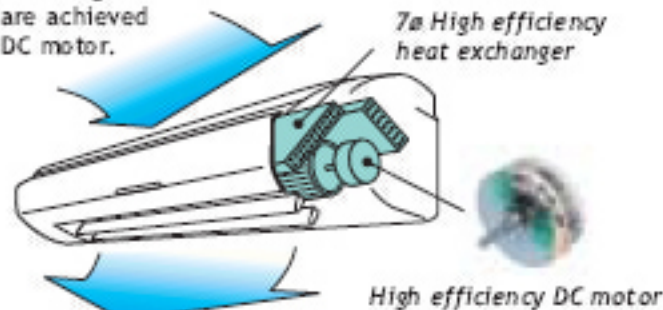

Large airflow and low noise achieved by top air intake

Quiet louver reduces annoying noise.

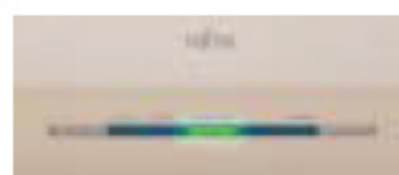

## High efficiency

High output and high efficiency are achieved by using a DC motor.

## Large center display

Color-coding the operation state lets you check the unit's operation status at a glance.

Cool/Dry/Fan

## Easy maintenance

One-touch long-life filter

Removable, washable drain pan
